

Connected Sprinkler Service

A sprinkler system is a cornerstone of any fire and life safety strategy that operates quietly in the background – until it doesn't.

Frozen pipes and corrosion can cause serious building damage, leading to expensive repairs and operational downtime.

Connected Sprinkler Service is an industry-first solution from Johnson Controls that continuously monitors your system to help ensure reliable, peace-of-mind performance. By integrating this innovative service into buildings, maintenance can benefit tremendously from the strategic transformation of being preventive to predictive.

Not only can Connected Sprinkler Service help prevent system failure, but it can also lead to **overall reduced maintenance costs of up to 30% and downtime up to 45%.***

Moving maintenance forward – from preventive to predictive service

Sprinkler system failure can happen in between regular inspections and without warning, leading to non-compliance, costly repairs and even damage to reputation.

Up to
30%
reduced maintenance costs

Up to
45%
reduced downtime

By proactively monitoring system performance in real-time, Connected Sprinkler Service can identify risks before a failure, helping avoid downtime and repair costs.

Tap into the many benefits

While preventative maintenance follows a predetermined schedule and may uncover potential impairments unexpectedly, predictive maintenance can provide earlier and more informed warnings to help maintain system health in its actual conditions.

By predictively maintaining your system with Connected Sprinkler Service, you can:

- Receive real-time notifications, no matter where you are, for adverse conditions such as freezing pipes, pressure imbalances and water presence.
- Avoid costly damage and downtime due to broken pipes and/or false system activations.
- Leverage historical, trending data to prioritize predictive maintenance on the parts of the system that need it most.
- Gain leverage with insurance companies for a potential reduction in premiums.
- Access expert advice on best practice to predictively avoid break/fix repairs.
- Improve the longevity of your fire sprinkler system.

Connected Sprinkler Service to prevent potential impairments
